PRODUCT DESCRIPTION
SilverDAT Connect

SilverDAT Connect	
Scope of performance	SilverDAT Connect
Version number	**01.09.4.03**
Short description	SilverDAT Connect is a browser-based application for retrieving connected car data via the High Mobility input channel and outputting the received data within a machine-readable Excel output (.csv). The current data availability per manufacturer can be viewed at the following link:https://airtable.com/appqv8fdlWYRB0D4/shry3EDO6lLiBunTm/tblCBBV23F1zBOnhl ▶ Transfer of the VINs to be requested via input file ▶ Creation of the desired job options (one-time retrieval or recurring daily, weekly or monthly schedulers) ▶ Once the job has been executed, the data of the vehicles is requested and the current status of the query is displayed within the application (successful, pending, or erroneous) ▶ The result of the retrieval can be exported as a .csv file and processed further
Limitations	SilverDAT Connect retrieves the data of High Mobility. Thus, only data for vehicles supported by High Mobility can be received. An up-to-date overview of the available brands and models can be found at the following link: https://www.high-mobility.com/car-api
Access/installation	Use of the licensed product requires an agreement to be in place regarding the SilverDAT data and information system. The system requirements for SilverDAT applications - available at https://www.dat.de/silverdat/systemvoraussetzungen - also apply.
Documentation	Manual in the user interface.
